

OCRIS from Expedio

Release V2.2.2.9 – November 2011

OCRIS Logger Enhancements

Improved horizontal scrolling between worksheet columns:

Upgrading to this version is recommended for those logging systems where any of the worksheet display areas span more than two horizontal scrolling widths.

Removal of excess line breaks when producing the OXO and CSV Exports:

Data entered via cut and paste actions can introduce additional line breaks in the text which would have previously resulted in unwanted line breaks in export files. This is fixed in this release.
